Summary
I'm interested in Computer Science and Computer Engineering,the
convergence of hardware components and software architecture,
equally I have a keen interest in the financial service industry
in its broadest form , specifically financial inclusion using latest
technology like block-chain,Artificial Intelligence ,so the interest in
Financial Technology arise from one's passion for Data Science
since Initially at during my first in 2015,I was study Bachelor of
Business Science(specializing in Analytics) I was fascinated with
idea of using data to make informed and insightful decision both
for businesses and individuals alike and how we can use the data
generated through the technological platform and/or system service
that that the end-users interact , however that is not an indication of
my willingness to settle and/or work only in the said industry nor is it
a limitation for my areas of interest.
Agile practitioner ,who lives and practice the ethos espoused in the
original "Agile manifesto",social interaction is encouraged over tools
and processes that are inherent in dynamic systems.
